## SUMMARY

---

I am Full Stack Web Developer with skills in both front-end and back-end development. While my experience is limited, I adapt quickly and communicate effectively. I am eager to tackle challenges, contribute to a team, and explore opportunities in cybersecurity and front-end development.

## PROJECT & WORK EXPERIENCE

---

### Junior Software Engineer – Effect

**JUN 2024 – FEB 2025**

- As a Software Developer at Effect, I contributed to the development and maintenance of a portfolio management software solution. I worked with Angular and TypeScript for the frontend and C# for backend repositories, designing and implementing RESTful APIs. My responsibilities included creating and refining functions and procedures while addressing project-specific requirements to enhance performance and usability.

### Entry level Full Stack Web Developer – Internship

**OCT 2023 – JAN 2024**

- During my internship, I gained experience in both front-end and back-end development. I started with HTML, PHP, CSS, and SQL to build static websites, including structuring a news website with headers, footers, and navigation. Transitioning to the back end, I focused on PHP and SQL to create a content management system and improve database skills. Later, I adopted MVC architecture to build dynamic article pages, enhancing code organization, scalability, and user experience.

## SKILLS

---

- Programming Languages:** PHP, C#, JavaScript, TypeScript
- Frontend Technologies:** Angular, React, HTML
- Backend Technologies:** SQL
- Tools & Software:** Microsoft Word , Git , SVN , Visual Studio 2022 , SSRS 2008

## EDUCATION

---

### Master's Degree in Software and Computer Engineering – UNIWA

**OCT 2018 - PRESENT**

- Thesis - Decentralized Data Management protocol using peer-to-peer networks and advanced security Technologies – React.js , Solidity , Pinata API , SQL ,
